Campus Connect

Introduction -

The aim of this website is to provide students within a campus a platform to share their thoughts and connect with others. The website can also be used by students to post a request for utilities such as books, movies, software, games etc. and other students can see these requests and interact with them.

The website can be of great use to help students connect with each other especially for freshers who can easily ask for advice, utilities etc. easily through the website.

The basic features of the website can be summarized as follows:

- Allow a student to post a message or request on the website.
- To provide the students a means to trade or sell items on this website such as books, software, accessories, etc. by means of a user-friendly interface.
- Sign up and Login feature to allow only verified users to post requests.

Design and Implementation –

The Website makes use of JavaScript and CSS to create an interactive web page along with PHP to retrieve or store any user given data from our SQL based server. It also provides a secure login feature which allows our users to manage their Accounts, post new requests along with confirm any pending requests from fellow students. Its goal is to build a community in which the students can easily trade items and make new friends while doing so.

While designing the website the main problem was selecting a good backend technology to back up the front end and support features like Login/SignUp Session management etc.

Frameworks/Libraries/Modules used:

Frontend:

- HTML, CSS
- JavaScript
- jQuery
- Bootstrap

Backend:

• php

Database Language:

- MySQL
- PL/SQL (Cursors, Triggers, Procedures)

<u>Database Overview</u> →

Database name := eztrade

Tables in eztrade :=

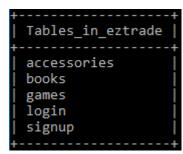

Figure 1 Tables in database

Field	Туре	Null	Key	Default	Extra
name userid pass email phone batch enroll sector	varchar(20) varchar(20) varchar(20) varchar(40) bigint(20) varchar(4) int(11)	NO NO NO NO NO NO NO	PRI UNI UNI	NULL NULL NULL NULL NULL NULL NULL NULL	

Figure 2 Signup Table

Field	21		Default	
userid pass	varchar(20) varchar(20)	NO	NULL NULL	

Figure 3 Login Table

Field	Туре	Null	Key	Default	Extra
uid price type cond brand model phone email	varchar(20) double varchar(20) varchar(5) varchar(20) varchar(50) int(11) varchar(40) varchar(40)	NO NO NO NO NO NO NO NO	MUL	NULL NULL NULL NULL NULL NULL NULL NULL	

Figure 4 Accessories Table

name	Field	Туре	Null	Key	Default	Extra
uid	author price email phone cond type form	r varchar(20) double varchar(40) int(11) varchar(5) varchar(40) varchar(20)	NO NO NO NO NO YES NO	MUL	NULL NULL NULL NULL NEW NULL NULL

Conclusion -

The website allows our users to manage their Accounts, post new requests along with confirm any pending requests from fellow students with a secure login feature. Its goal is to build a community in which the students can easily trade items and make new friends while doing so.

The only shortcoming is that the website needs a dedicated php server and mysql database with tables as described above along with the lite-server to function properly like xampp etc.

Also due to time constraints some of the features lie clicking on the buying button while browsing for items may not function properly which I intend to fix in the future.
